	Hope Foundation's Finolex Academy of Management and Technology, Ratnagiri		
	Department of Computer Science and Engineering (AIML)		
Subject name: Data Warehousing and Mining Lab			Subject Code: CSL503
Class	TE CSE	Semester –V (CBCGS)	Academic year: 2024-25
Name of Student	GIRIPRASATH K		QUIZ Score :
Roll No	33	Experiment No.	05
Title: Using open source tools to generate association rules.			

1. Lab objectives applicable: LOB4: To make students well versed in all data mining algorithms, methods, and tools.			
2. Lab outcomes applicable: LO3: Demonstrate an understanding of the importance of data mining. LO6: Implement the appropriate data mining methods like classification, clustering or Frequent Pattern mining on large data sets.			
3. Learning Objectives: 1. To discover buying patterns.			
4. Practical applications of the assignment/experiment: Market basket can be analyzed to know the products which are bought together by customers frequently.			
5. Prerequisites: Java or Python or C programming language, mysql.			
6. Minimum Hardware Requirements: 1. I series processor, RAM 4GB,			
7. Software Requirements: 1. JDK 12 or above /Python 3.8.0 and editor.			
8. Quiz Questions : https://docs.google.com/forms/d/e/1FAIpQLSebmBjIKprJzZQjF106l-Ernk8YHYAk6rmi-vvX9e3LcYOJqw/viewform?usp=sf_link			
9. Experiment/Assignment Evaluation:			
Sr. No.	Parameters	Marks obtained	Out of
1	Technical Understanding (Assessment may be done based on Q & A <u>or</u> any other relevant method.) Teacher should mention the other method used -		6
2	Lab Performance		2
3	Punctuality		2
Date of performance (DOP)		Total marks obtained	10

12. Learning Outcomes Achieved

1. Students are able to find the frequent pattern from the provided set of transactions.

13. Conclusion:

1. Applications of the Studied Technique in Industry

Association rule mining is used extensively in retail for market basket analysis, identifying product combinations that frequently occur together. This technique helps businesses optimize product placement, design promotions, and enhance cross-selling strategies.

2. Engineering Relevance

In engineering, association rule mining aids in discovering patterns in large datasets, such as fault detection and system optimization. It is crucial for predictive maintenance and understanding complex relationships within engineering systems.

3. Skills Developed

The experiment with association rule mining develops skills in data analysis, pattern recognition, and the use of algorithms to extract meaningful relationships from data. It also enhances the ability to interpret and apply these rules for strategic decision-making and operational improvements.
